

Introducing the new MP Cabinet T140!

MP Elektronik, the company known for their revolutionary Dry Cabinets, is proud to introduce the MP Cabinet T140! Specifically designed for PCB conformal coating applications the T140 offers an advanced lacquer curing solution. With heating up to 140°C the T140 will ensure quick and reliable results with a build quality that is never before seen.

Never have operator burns again!

MP Elektronik has developed an intelligent heating and safety solution. Taking inspiration from our revolutionary Dry Cabinets we have integrated a full graphical touch screen display into the T140 for protection of all process parameters. You can also set at what temperature you want our discreet and highly effective magnetic locking system to unlock. With this unique system, you can make sure the cabinet stays locked (without keys!) until it is at a safe temperature to open.

Full Traceability.

Our unique RFID system allows you to assign operators to the cabinet based on their ID card. With this system, you can make sure that operators that are not assigned to the cabinet are unable to open the cabinet. This allows you to always be in control of your production line. No more lost keys, no more making key copies, and no more chasing people around!

The MP Cabinet T140, an intelligent cabinet for an intelligent era.
